

Het Thummar

Ahmedabad, Gujarat

-  Phone number : +91 6351587715
-  Email : hetthummar2474@gmail.com
-  GitHub : github.com/het-thummar24
-  LinkedIn : in/het-thummar
-  Portfolio : hetthummar.vercel.app

Profile

Computer Engineering student skilled in Python, Machine Learning, Deep Learning, LLMs and Agentic AI. Built hands-on projects involving RAG pipelines, autonomous AI agents, LangChain, PyTorch, and SQL databases. Solid understanding of data structures, algorithms, and software development lifecycle . Seeking an entry-level AI/ML Engineer role to apply project-based expertise in building intelligent, real-world solutions. A focused, quick learner with a strong drive to adapt, grow, and deliver results in fast-paced environments.

Education

LJ Institute of Engineering and Technology	Aug 2025 - Present
Bachelor of Engineering in Computer Engineering - CGPA : 8.50	Ahmedabad, Gujarat

Technical Skills

- Languages : Python, Java, JavaScript, SQL
- AI/ML frameworks : Pandas, Numpy, Matplotlib, Scikit-learn, TensorFlow, Hugging Face
- LLMs & Generative AI : LangChain, OpenAI API, RAG Systems, Prompt Eng., NLP, Fine-tuning
- Automation & MLOps : MLflow, n8n, Vectorless RAG, Agents & Tools
- Web Development : Django, HTML, CSS, React.js, Node.js
- Soft Skills : Problem Solving, Critical Thinking, Quick Learner, Communication

Projects

Enterprise Generative AI RAG Copilot	Fab 2026
Developed an Generative AI copilot using an open-source LLM (LLaMA-3) and Retrieval- Augmented Generation to answer questions over large document collections. Implemented semantic search with vector databases, prompt engineering, citation-based responses to deliver accurate, grounded answers while reducing hallucinations.	Oct 2025
Multi-Modal Fake News Detection System	
Designed and deployed a fake news detection system that analyzes both news text and associated images using Transformer-based NLP and CNN-based vision models. Built a multi-modal fusion pipeline to improve detection accuracy over single-modal models and added explainable AI to justify predictions and increase trust.	Aug 2025
Hospital Management System Python, Django	
The Hospital Management project is a Django-based web application designed to to manage hospital operations efficiently. It supports CRUD operations for patients, staff, and departments with a structured database. The system provides an easy-to-use web interface through Django templates and static assets. It helps streamline record-keeping, updates, and retrieval of hospital data	

Certifications

DBMS Course - Master the Fundamentals and Advanced Concepts Scaler	Jun 2025
Exploratory Data Analysis for Machine Learning IBM	Jun 2024
Inheritance and Data Structures in Java University of Pennsylvania	May 2024
